

TPI Centre Corporate Assessment Release Calendar: Carbon Performance

The TPI Global Climate Transition Centre (TPI Centre)'s Carbon Performance (CP) methodologies assess the largest publicly listed companies by market capitalisation across 13 of the most emissions-intensive sectors, including the newly added chemicals sector. Companies' emissions reduction targets are evaluated against sector-specific benchmarks to determine their alignment with the goals of the Paris Agreement.

As of March 2026, please note the following two updates:

- We are updating the short-term alignment year to 2030.** Previously, the CP alignment scores were provided against three timeframes: short term (2028), medium term (2035) and long term (2050). As we approach 2028, the short-term timeframe will be updated to 2030, while the medium-term (2035) and long-term (2050) will remain unchanged.
 - The change will be integrated into the 2026 assessment cycle as per the tentative timeline below. Historical data, including companies' 2028 alignment scores, will remain available to download as Excel files through the [TPI corporate online tool](#).
- We are adding the chemicals sector to the Carbon Performance assessments.** This will bring 24 companies from the chemicals sector into the CP corporate universe, increasing its coverage up to 13 high-emitting sectors. This follows the publication of a [discussion paper](#) in September 2025 that introduced a novel approach to assessing this highly heterogeneous sector, which is one of the largest manufacturing industries by market capitalisation.

TPI Centre Tentative Annual Carbon Performance Assessment Cycle¹

- Please note that the timeline shown above may be subject to change.
- Assessments of TPI companies outside the [CA100+](#) universe will continue to be uploaded earlier in the year, providing investors with up-to-date data ahead of the typical Q4 publication of CA100+ company assessments.
